

AMENDMENTS TO THE CLAIMS

The listing of claims will replace all prior versions, and listings, of claims in the application:

Listing of Claims:

*Sub C1*  
Claims 1-44 (Cancelled).

Claim 45. (Currently Amended) A system for receiving electronic program guide (EPG) data from one or more EPG data providers in a plurality of ~~one or more~~ data formats and for providing consolidated EPG data available in a standardized format to one or more applications running on the system, comprising:

*B1 cont'd*  
an EPG services module for receiving EPG data from a plurality of ~~the one or more~~ EPG data providers and providing consolidated EPG data in a standardized format to the one or more applications residing on the system, the EPG services module comprising:

one or more EPG loader modules with a separate EPG loader module for each EPG data source, each EPG loader module being configured to receive EPG data from an EPG data provider in a native format used by the EPG data provider and including computer executable instructions for converting the EPG data received from the EPG data provider from its native format to a standardized format compatible with the EPG services module and the one or more applications;

an EPG writer module logically connected to each of the one or more EPG loader modules with computer executable instructions for

collecting the EPG data in the standardized format from the one or more EPG loader modules;

enforcing a scaling of the collected EPG data according to factors provided by a user; and

writing ~~at least a portion of the~~ scaled EPG data of the standardized format to a storage associated with the system; and

an EPG control module having computer executable instructions for  
receiving requests for EPG data from the one or more applications;  
retrieving the EPG data responsive to the request from the storage;  
and  
returning the requested EPG data to the one or more applications;  
and

an application program interface configured to provide a standardized interface  
between the EPG control module and the one or more applications requiring EPG data,

such that the system can be readily modified to add additional EPG data  
providers, to remove existing EPG data providers, or to accommodate changes in the  
native formats of existing or future EPG data providers without having to modify or  
update the code of any of the one or more applications.

Claim 46 (Cancelled).

Claim 47. (Currently Amended) A system as defined in claim 45, wherein ~~the writer module further comprises computer executable instructions for scaling the collected EPG data according to at least one of the following~~ the factors provided by [[a]] the user before writing the EPG data to the storage comprise at least one of the following factors: time; language; richness; channels, and services.

Claim 48. (Previously Presented) A system as defined in claim 45, wherein the writer module further comprises computer executable instructions for resolving conflicts between EPG data received from two or more EPG data providers.

Claim 49. (Previously Presented) A system as defined in claim 45, wherein the one or more loader modules further comprise computer executable instructions for implementing a priority scheme.

Claim 50. (Previously Presented) A system as defined in claim 45, wherein the EPG writer module further comprises computer executable instructions for limiting the amount of the EPG data that may be placed in the storage.

Claim 51. (Previously Presented) A system as defined in claim 50, wherein the EPG writer module further comprises computer executable instructions for removing expired EPG data from the storage.

Claim 52. (Previously Presented) A system as defined in claim 51, wherein the EPG writer module further comprises computer executable instructions for keeping the last EPG data stored to a particular portion of the storage.

Claim 53. (Previously Presented) A system as defined in claim 45, wherein the storage is a database.

Claim 54. (Previously Presented) A system as defined in claim 45, wherein the one or more EPG loader modules further comprises computer executable instructions for recording EPG data with digital recordings of programming represented by the EPG data.

Claim 55. (Previously Presented) A system as defined in claim 45, wherein each of the EPG loader modules is capable of being added to the device and removed from the device.

Claim 56. (New) In a system having one or more applications, a method for receiving electronic program guide (EPG) data from multiple EPG data providers in a plurality of data formats and for storing consolidated EPG data available in a standardized format in storage comprising the acts of:

receiving EPG data from a plurality of EPG data provides in a plurality of different formats;

reformatting the EPG data into a standardized format compatible with the system;  
enforcing a scaling of the reformatted EPG data according to factors provided by  
a user; and  
writing the scaled and reformatted EPG data into a storage associated with the  
system.

Claim 57. (New) A method as defined in claim 56, wherein the act of receiving EPG  
data from a plurality of EPG data provides in a plurality of different formats comprises the  
following:

*B1  
cont'd*  
an act of receiving EPG data from a first EPG data provider using a first loader module;  
and  
an act of receiving EPG data from a second EPG data provider using a second loader  
module.

*C1  
cont'd*  
Claim 58. (New) A method as defined in Claim 57, further comprising the  
following:

an act of implementing conflict resolution for the first and second loader modules.

Claim 59. (New) A method as defined in claim 57, wherein the first and second  
loader modules follow a priority scheme.

Claim 60. (New) A method as defined in claim 56, wherein the act of enforcing a  
scaling of the EPG data further comprises an act of scaling the EPG data according to at least one  
of the factors of: time; language; richness; channels, and services.

Claim 61. (New) A method as defined in claim 56, further comprising an act of  
limiting the amount of the scaled and reformatted EPG data that may be placed in the storage.

Claim 62. (New) A method as defined in claim 56, further comprising an act of removing expired EPG data from the storage.

Claim 63. (New) A method as defined in claim 56, further comprising an act of accessing, for the one or more applications, the EPG data in the storage.

*B1  
cont'd*

Claim 64. (New) A computer program product for use in a system having one or more applications, the computer program product for implementing a method for receiving electronic program guide (EPG) data from multiple EPG data providers in a plurality of data formats and for storing consolidated EPG data available in a standardized format in storage, the computer program product comprising one or more computer-readable media having thereon computer-executable instructions that, when executed by one or more processors of the system, cause the system to perform the following:

*C1  
cont'd*

- detecting receipt of EPG data from a plurality of EPG data provides in a plurality of different formats;

- reformatting the EPG data into a standardized format compatible with the system;
- enforcing a scaling of the reformatted EPG data according to factors provided by a user; and

- writing the scaled and reformatted EPG data into a storage associated with the system.

Claim 65. (New) A computer program product as defined in claim 64, wherein the computer-executable instructions for performing the act of detecting receipt of EPG data from a plurality of EPG data provides in a plurality of different formats comprise computer-executable instructions for performing the following:

- an act of detecting receipt of EPG data from a first EPG data provider using a first loader module; and

- an act of detecting receipt of EPG data from a second EPG data provider using a second loader module.

Claim 66. (New) A computer program product as defined in Claim 65, wherein the one or more computer-readable media further have thereon computer-executable instructions that, when executed by the one or more processors, cause the system to implement conflict resolution for the first and second loader modules.

Claim 67. (New) A computer program product as defined in claim 64, wherein computer-executable instructions for enforcing a scaling of the EPG data further comprise computer-executable instructions for scaling the EPG data according to at least one of the factors of: time; language; richness; channels, and services.

Claim 68. (New) A computer program product as defined in claim 64, wherein the one or more computer-readable media further have thereon computer-executable instructions that, when executed by the one or more processors, cause the system to limit the amount of the scaled and reformatted EPG data that may be placed in the storage.

Claim 69. (New) A computer program product as defined in claim 64, wherein the one or more computer-readable media further have thereon computer-executable instructions that, when executed by the one or more processors, cause the system to remove expired EPG data from the storage.

Claim 70. (New) A computer program product as defined in claim 64, wherein the one or more computer-readable media further have thereon computer-executable instructions that, when executed by the one or more processors, cause the system to access the EPG data in the storage for the one or more applications.
